

NewsHive

NewsHive is a cutting-edge Android app designed to keep users informed and up to date with the latest news from around the world. Built using the powerful Picasso library and Retrofit API, NewsHive seamlessly retrieves and displays news articles from various sources. The Picasso library enhances the app's performance by efficiently loading and caching images, providing users with a visually appealing experience. Retrofit API, on the other hand, facilitates smooth communication between the app and the news API, enabling quick and reliable data retrieval. With NewsHive, users can access a wide range of news categories, read detailed articles, and stay informed effortlessly.

Resources/Tools:

- Android Studio
- JAVA Programming
- News API
- Retrofit for REST API Communication
- Picasso for Image Loading
